Ep33 Celiac Part 2: How Does the Immune System Attack the Small Intestine?

Across

2. A disease where the immune system attacks its own body

3. A type of lymphocyte that helps coordinate immune responses or attack cells.

5. Tiny, finger-like projections lining the small intestine that help absorb nutrients from food.

7. A type of T cell that attacks cells it thinks are dangerous. In celiac disease, they mistakenly attack the lining of the small intestine.

8. Immune cells that pick up pieces of something dangerous and show them to T cells

9. Another name for white blood cells, which help protect the body.

10. A type of lymphocyte that produces

Down

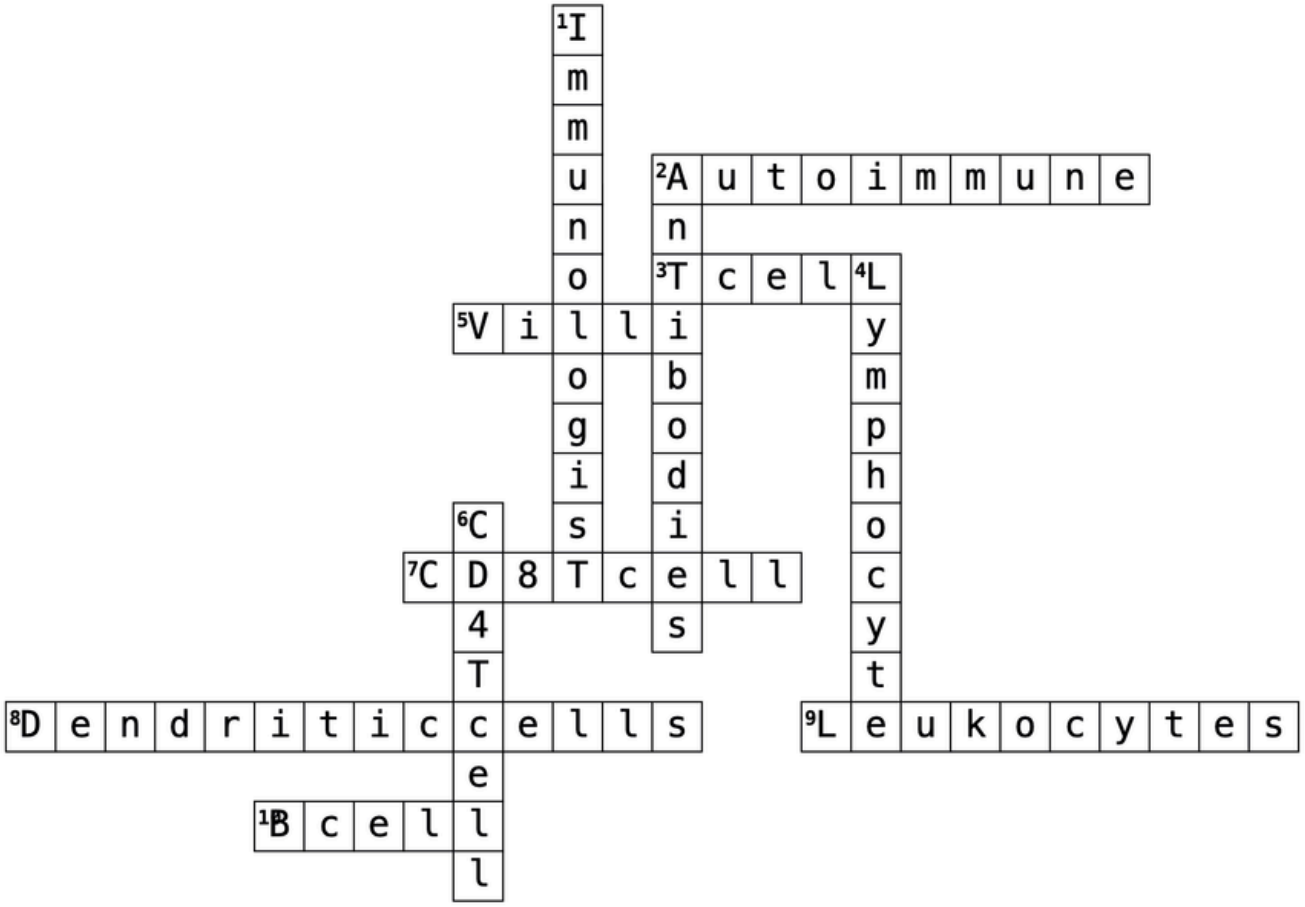

1. A specialist who studies the immune system.
2. Proteins made by B cells that help the immune system recognize things.

4. A group of white blood cell that includes B cells and T cells.

6. A type of T cell that acts like a commander, sending out chemical signals to activate other immune cells.
